

## Data Fill

### Expand due diligence checks to mitigate financial and reputational risk

Even with the proliferation of mobile devices, physical documents such as government-issued identity documents and insurance cards to verify identity or eligibility are still very common. IDology offers image and data capture solutions help to bridge this gap by extracting critical text and images from documents and converting them to ready-to-use digital data.

Our solutions help you easily scan the front and back of identity documents online or in person using common mobile devices or scanners. We apply patented technology to automatically capture the document, improve image quality, and extract text and images. The text and images are processed instantly, and the resulting data is used to populate other systems or applications efficiently and accurately. No more manual entry, photocopying, or endless paperwork – just rapid, efficient digital processes that save time and money.

# Solution Features

## Image capture

Apply patented technology to automatically crop the document image, prevent glare, and detect document type without customer intervention.

## Data extraction

Instantly convert printed text, images and barcodes from scanned identity documents to ready-to-use data.

## Data intake

Integrate extracted data with other systems and applications or use it to query a data source.

## Omni-channel

Capture and process IDs using mobile devices, desktop scanners, and self-service kiosks.

## Privacy minded

data and images are encrypted and never stored on the local document capture device.

## Why IDology?

### Speed up transactions

Extract data and images instantly and populate your application with accurate information in seconds.

### Cut labor costs

Scale back costly, labor-intensive data entry tasks and replace them with efficient digital workflows.

### Improve decision making

Access high-quality digital data for automated and accurate decisions eliminating manual, error-prone processes.

### Protect sensitive information

Reduce the risk of personal information falling into the wrong hands with a secure, privacy-minded solution.

### Enhance the customer experience

Enable customers to easily capture identity documents, so transactions can be accurately processed without fuss or delay.
